ANNUAL REPORT

on the

Working of the Civil Hospitals and Dispensaries in the Province of Assam for the year 1933

WITH BRIEF EXPLANATORY NOTES.

No. 4308, dated Shillong, the 15th May 1934.

From—Colonel J. P. CAMERON, C.S.I., C.I.E., F.R.C.P.E., V.H.S., I.M.S., Inspector-General of Civil Hospitals, Assam,

To—The Secretary to the Government of Assam in the Transferred Departments.

I have the honour to submit my report on the working of the Hospitals and Dispensaries in the Province of Assam for the year 1933.

I held charge of the Department up to the 24th May 1933, when I proceeded on combined leave for six months, during which period
Introductory. Lieut.-Colonel J. Morison, C.I.E., I.M.S., acted for me. I assumed charge again on the 25th November 1933, and continued in charge of the Department to the end of the year.

2. The year opened with 257 Hospitals and Dispensaries of all classes and closed with 258 in working order. Two new Local Fund Dispensaries were opened during the year—one at Tambulpur and the other at Kamarkuchi, both in the district of Kamrup. The railway Dispensary at Juria in the district of Nowgong was closed.

3. The total number of in and out-patients treated at the State Public, Local Fund and private aided Hospitals and Dispensaries rose from 2,168,021 in 1931 to 2,297,511 in 1932, but fell to 2,246,355 in 1933, i.e., a decrease of 51,196 on the previous year's figure. The districts of Nowgong, Sylhet, Cachar and Khasi and Jaintia Hills show a decrease of 77,938, 61,623, 26,546 and 4,399, respectively. The fall in the attendance of out-door patients in Nowgong, Sylhet and Cachar is mainly due to the enforcement of the one anna levy from the non-indigent. This system was more freely practised during the year in order to discourage the attendance of those not really ill. On market days hospitals are usually inundated with people, many of whom merely attend for the sake of something to do and to get medicines for their friends. The decline in attendance in the Khasi and Jaintia Hills is attributed to the healthier general condition of the district. Malaria was not so severe as in the previous year and there was comparative freedom from epidemics of respiratory diseases.

The highest increases were recorded in the districts of Kamrup (43,519), Goalpara (31,209), Sibsagar (14,490), Darrang (11,476), Lushai Hills (6,177), Garo Hills (5,402), Lakhimpur (3,770) and Manipur (2,345).

The increases in the first four districts were chiefly due to a higher incidence of Malaria in the rural areas.

The total number of in-patients rose from 15,079 in 1931 and 15,739 in 1932 to 16,777 during the year under report, and the daily average attendance from 637.69 and 663.72 to 688.08.
(b) In-patients. The death rate among in-patients was 5.42, against 5.91 in the previous year. The Naga Hills and Lushai Hills districts show the largest increase in in-patients, viz., 634 and 91, respectively.

More in-patient accommodation is urgently required at Mokokchung, in the Naga Hills, and I am addressing the Government separately in this connexion.

The districts of Kamrup and Khasi and Jaintia Hills show decreases of 131 and 24, respectively, due to keeping patients in hospital sufficiently long to effect complete cure, as advocated in my last administration report.

The total number of out-patients fell from 2,281,772 in 1932 to 2,229,538 in the year under review : and the percentage of personal attendance from 52.08 to 50.26.

(c) Out-patients.

The average daily attendance, however, rose from 9,784.03 to 10,197.92.

4. The total number of beds available was 1,654 (1,260 for males and 394 for females), against 1,649 in 1932. The increase of five beds is returned by certain Police Hospitals in the Sadiya Frontier Tract.

Statement C—Diseases treated at hospitals and dispensaries of all classes.

Altogether 2,475,245 patients were treated in all classes of hospitals and dispensaries, against 2,518,298 in 1932. Males decreased by 55,564 and females increased by 12,511.

The increase in female attendance is a pleasing factor and goes to show increasing confidence in Western Medicine. With the spread of Health Welfare Work it is hoped the attendance will further increase.

The diseases for which the largest number of patients attended were :—

Malaria 737,721 ; Other Diseases of the Skin 373,255 (includes 260 cases of Yaws) ; All Diseases of the Respiratory System, except Pneumonia and Tuberculosis of Lungs 162,131 ; All Other Diseases of the Digestive system 145,442 ; Round Worms 136,043 ; Diseases of the Eye 103,387 ; Inflammation Ulcerative 97,433 ; Injuries (general and local) 89,934 ; Diseases of the Organs of Locomotion 82,580 ; and Diseases of the Stomach 75,095.

Increases chiefly occurred under Malaria, Diseases of the eye and, to a lesser extent, diseases of the Ductless or Endocrine Glands, Influenza and All other local diseases.

Mental diseases rose from 191 in 1932 to 281 in 1933.

Decreases chiefly occurred under Other Diseases of the Skin (68,488), Round Worms (12,034), Diseases of the Stomach (5,518), All Other Diseases of the Digestive System (5,199), All Other General Diseases (4,205) Diseases of the Organs of Locomotion (3,156) Injuries (general and local) (2,833), Inflammation Ulcerative (2,483) and Diseases of the Intestines (1,467).

One case of poisoning by opium was treated, against 6 in 1932 ; while the number treated for poisoning by other means increased from 557 to 693 in 1933.

Six hundred and sixty-six normal (with 1 death) and one hundred and eighty-six abnormal (with 13 deaths) labour cases were attended, against six hundred and thirty-five (with no death) and one hundred and ninety-eight (with 17 deaths) in the previous year.

5. This statement shows the sex incidence of Venereal Diseases of in-door and out-door patients in all classes of Hospitals and Dispensaries.

Supplementary Statement C—Venereal diseases.

The total number of male and female patients treated for Gonococcal Infection was 4,146 and 597, respectively, against 4,333 and 618 in 1932. The number of Syphilis cases treated (primary and secondary), fell from 2,265 in 1932, to 2,234 in 1933. The number of male patients rose from 1,749 to 1,794.

Attendance for " Other Diseases of Venereal Origin " fell from 699 male and 137 female to 569 and 120, respectively.

The Anti-syphilis campaign continued in the Naga and Lushai Hills ; 59 cases being treated in the former and 33 in the latter district during the year, against 126 and 70, respectively, in 1932. The fall in the number of patients treated is due to a reduction in the budget allotment for prosecuting this campaign.

6. This statement is merely an abstract from Statement C for infectious diseases including Malignant growths, Opium poisoning and Beri-Beri, and shows the distribution of these diseases by districts.

Statement D—Infectious diseases.

Cholera.—One thousand eight hundred and one patients were treated during the year in Hospitals and Dispensaries, against 1,535 in the previous year. Of these Sylhet furnished 1,328 and Cachar 405.

No cases were reported by the Lushai Hills, Sibsagar, Nowgong, Balipara Frontier Tract, Lakhimpur and Sadiya Frontier Tract.

Malaria.—In all 737,721 cases were treated, with 116 deaths, against 697,072 and 134, respectively, in the previous year. The chief increases, as in the previous year, were in the districts of Kamrup (40,111), Sylhet (23,119) and Goalpara (17,581); while the district of Nowgong shows a marked decrease of 50,627. The continued increase of Malaria in the three districts mentioned will be brought to the notice of the Malaria Research Officer for investigation and necessary action.

Dysentery.—There was an increase of 833 cases on the previous year's return. The total number of patients treated was 43,507, with 109 deaths, against 42,674 and 99 deaths, respectively, in 1932. The disease was very prevalent throughout the province and no district was free from it. The highest figures are shown by Sylhet (14,800), Goalpara (7,048), Kamrup (4,838) and Cachar (2,591). I am convinced that a wider use of Bacteriophage would help to curtail this disease, which is chiefly of the Bacillary type, especially if used early. It is noteworthy that in the districts in which 'phage' was distributed and easily available Dysentery was less prevalent.

Kala azar.—There were 4,443 cases and 48 deaths, against 3,693 and 41 deaths in 1932.

The following figures show the number of cases treated in hospitals and dispensaries, other than those directly under the Public Health Department.

1926	10,416.
1927	8,277.
1928	6,574.
1929	6,166.
1930	4,308.
1931	3,755.
1932	3,696.
1933	4,443.

The increase in the number of cases treated in hospitals and dispensaries coincides with an increase in the incidence of the disease during the year. Whereas only 11,958 cases were dealt with in the province in 1932, 12,649 cases actually came under treatment last year. Although this increase may appear insignificant, it sounds a note of warning that our campaign against *kala azar* should not be relaxed in any way.

Leprosy.—Altogether 972 cases were treated, against 451 in 1932, 634 in 1931 and 847 in 1930. The large number of lepers treated during the year was due to better facilities afforded for treatment in Hospital and Dispensaries by the provision of special treatment centres.

Tuberculosis of Lungs.—There were 1,447 cases and 70 deaths, against 1,413 cases and 85 deaths in the previous year. This disease is very prevalent in the district of Sylhet, which reported 366 cases and 6 deaths, against 356 and 2 deaths in 1932.

As I pointed out in my last report a hospital on the Sanatorium principle is badly required in Assam for dealing with patients suffering from Tuberculosis, who have neither the means nor the desire to leave the province for specialized treatment elsewhere. There appears to be some prospect of a scheme being evolved in the near future.

Other Tubercular Diseases.—Two hundred and eighty-nine patients were treated in 1933, against 231 in the previous year.

Small-pox.—The figures fell from 32, with no deaths, in 1932 to 6, with 1 death, in 1933.

Influenza.—The number of patients increased from 29,086 in 1932 to 33,524 in 1933; but the number of deaths was the same as in the previous year—viz. 3.

Malignant growths.—There were 211 cases with 9 deaths, against 231 with equal number of deaths in 1932.

Cases of Beri-Beri fell from 192 in 1932 to 125 in the year under report. The highest incidence (75) occurred in the Khasi and Jaintia Hills, against 135 in the previous year.

The investigation into the cause of Epidemic Dropsy at Gauhati last year yielded no definite result. The Chemical Examination of the samples of mustard oil suspected showed linseed oil to be present; but physiologically no harmful effect was produced on animals. It is just possible that the Epidemic Dropsy was caused by diseased seeds used in the preparation of the oil.

There were 7 cases of Relapsing Fever. No case of Plague was reported during the year.

There were slight increases under Pneumonia and Enteric Fever, while cases of Gonococcal Infection and Syphilis fell from 4,951 and 2,265 to 4, 43 and 2,231, respectively.

7. Of the 2,246,315 patients treated during the year, 391 were Europeans and Anglo-Indians, 1,161,916 Hindus, 763, 123 Muhammadans and 320,885 belonged to other classes. The proportion of adult males to females during the year, was, for Hindus, 100 to 29, and for Muhammadans, 100 to 24.

Statement E—Castes and Sexes of patients.

8. The total number of surgical operations performed in all classes of Hospitals and Dispensaries during the year 1933, was 22,226, against 21,521 in the preceding year. The results of these operations, including those remaining from the previous year, were as follows:—

Statement F—Operations.

Year.	Cured.	Relieved.	Discharged otherwise.	Died.	Remaining under treatment at the close of the year.
1	2	3	4	5	6
1932 ...	21,081	231	59	71	51
1933 ...	21,899	164	52	59	56

The selected operations performed during 1933 numbered 1,463, against 1,277 in 1932. These operations included Excision of Tumours 93, Excision of Joints 5, Operation on Bones 86, Amputations 34, Extraction of Lens 325, Abdominal Section 94, Incision and Drainage for Abscess of Liver 23, Removal of Vesical Calculi 101, Obstetric conditions 122 and other important operations 580.

9. The income and expenditure of the state public, local fund and private aided Hospitals and Dispensaries during the year, are compared with the figures of the previous 3 years in the subjoined statement:—

Statement G—Income and expenditure.

Year.	Income.	Expenditure.	Government contribution.	Local and Municipal Fund contribution.	Subscriptions and donations.		Percentage of total outlay charged to Provincial Revenue.
					Europeans.	Indians.	
1	2	3	4	5	6	7	8
1930 ...	9,74,927	7,94,045	4,40,713	2,75,519	6,427	30,778	55
1931 ...	9,67,443	8,05,283	4,42,455	2,85,214	5,197	30,884	55
1932 ...	9,25,415	7,75,905	4,25,326	2,70,096	8,693	33,788	55
1933 ...	9,30,757	7,74,722	4,11,208	3,01,899	5,002	35,548	53

10. *Medical Department.*—This statement shows the distribution of Medical Personnel including the Inspector-General of Civil Hospitals, Director of Public Health and the Director of Pasteur Institute and Medical Research Institute, Shillong.

Statement H—Distribution of the officers of the Medical Service.

There were 294 Medical Officers and subordinates in the department, against 291 in 1932, of whom 118 were employed in the urban area and 176 in the rural area.

The increase was mainly due to creation of new posts in the cadre of Local Board Doctors in connection with the opening of new dispensaries.

Of the officials employed in the urban area 12 officers belonged to the Indian Medical Service, 4 to the Indian Medical Department and 39 to the Assam Medical Service (Senior) 3 of whom held appointments as Civil Surgeons and 1 as Medical Superintendent of the Provincial Mental Hospital.

Two Civil Assistant Surgeons were on foreign service within the Province.

Sixty three Sub-Assistant Surgeons were also employed in the urban area, 14 of whom were Lady Doctors.

Of the officials employed in the rural area 111 were Government Sub-Assistant Surgeons and 65 Local Board Medical Officers.

5 European nursing sisters, 3 Indian Nurses and 19 Midwives were employed during the year, of whom 24 were posted in the urban area and 3 in the rural area.

11. A statement showing the number of cases treated in Government leper

Leprosy.

institutions in the province is given in the margin.

	Remaining from previous year.	Admitted.	Total.	Discharged cured or relieved.	Discharged other wise.	Died.	Remaining at the end of the year.
1	2	3	4	5	6	7	8
Sylhet Leper Asylum	73	28	101	12	10	9	70
Kohima Leper Hospi- tal.	29	3	32	1	6	4	21
Leper Ward, Dhubri	12	13	25	3	13	...	9
Leper Colony, Tura	52	200	252	1	162	5	84

The Gauhati Municipal Board has shown considerable enterprise in constructing a Leper Asylum at Gauhati, providing accommodation for 20 in-patients. The Hon'ble Minister, Local Self-Government sanctioned a grant of Rs. 250, towards this project, and the asylum is now functioning satisfactorily. An out-patient clinic has been established in connection with this institution and a Government Sub-Assistant Surgeon from the Civil Hospital is in daily attendance.

The American Baptist Foreign Missionary Society has also established a Leper Colony at Jorhat, on Government land which has been handed over to the Society as a free gift. The question of financial assistance by Government is under consideration. At the moment there are 46 patients under care and treatment in the colony.

Out-patient clinics have been established at all Sadr and Subdivisional Headquarters and at many of the more important out-lying dispensaries.

The number of out-door clinics rose from 81 in 1932 to 100 in 1933, while 45 clinics were opened at dispensaries under the Public Health Department. Altogether 4,113 lepers came under treatment during the year in the State and Local Board Hospitals.

Leprosy surveys were carried out under the directions of Civil Surgeons in the districts of Cachar, Nowgong, Lakhimpur, Sadiya Frontier Tract and Garo Hills, and these surveys resulted in the detection of 1,314 individuals suffering from Leprosy, who were brought under treatment.

The Assam Leprosy Relief Committee made substantial grants towards the maintenance of Public Health Department dispensaries for the treatment of lepers and for the erection of suitable treatment sheds in connection with the various Civil Hospitals and Local Fund Dispensaries.

Two Assistant Surgeons of the Public Health Department received training during the year at Calcutta in the technique of leprosy treatment, and a great many Sub-Assistant Surgeons received similar training in the province under previously trained medical officers.

Some definite headway was made during the year in our organisation for dealing with Leprosy in the province. We are, however, in need of extra hospital accommodation for dealing with patients in the early and infectious stages of the disease. It is hoped that a separate hospital will be established in due course for the reception and treatment of such cases.

The question of forming a Provincial Leprosy Board has been postponed for consideration when the financial situation shows some improvement.

12(a) *Buildings*.—The total outlay on buildings and repairs amounted to Rs. 52,579, against Rs. 64,097 in 1932.

The bulk of this amount was spent on petty repairs and maintenance of existing buildings. Owing to financial stringency the expenditure on new projects was reduced to Rs. 9,735, against Rs. 22,512 in the previous year.

Owing to lack of funds and the uncertainty of utilizing the Medical School buildings at Sylhet for some time to come for school purposes, it has been decided to transfer the Civil Hospital to the main school building during the current year and to carry on there temporarily until a new Civil Hospital is constructed. This will enable the Medical School buildings to be profitably utilized until they are required for their original purpose. The Hospital will become a provincialized institution from the date of transfer.

The scheme for providing Shillong with an up-to-date Civil Hospital has been through several vicissitudes ; and the decision ultimately arrived at was to build two separate Hospitals—one for men and one for women and children.

Among the various other projects held in abeyance for want of funds there is great need for Civil Assistant Surgeons' quarters at Habiganj and Sunamganj, where it is not possible to rent suitable houses. These quarters should be built as soon as funds can be provided.

The small provision of Rs. 6,000 made by Government during the year 1933-34 for minor and petty works was allotted as follows :—

	Rs.
1. Certain additions and alterations to ward No. 2 of the Dibrugarh Civil Hospital.	1,117
2. Reconstruction of the Cookshed attached to the Civil Hospital at Aijal.	910
3. Reconstruction of the sweeper's shed attached to the Civil Hospital at Tura.	580
4. Provision of an additional Donaldson's patent 4 seated latrine for use of the female keepers of the Tezpur Mental Hospital.	500

Out of the provision of Rs. 2,000 made in the Medical budget for departmental works, allotments were made for the following :—

- (i) A *pucca* cattle shed in connexion with the Dairy Farm of the Tezpur Mental Hospital, Rs. 1,450.
- (ii) Provision of a pipe line in the Maibong Hospital, Rs. 533.

The following improvements were carried out to Local Fund Hospitals and Dispensaries :—

- (a) The paying wards of the Nowgong Sadr Hospital, provided by the generosity of Rai Bahadur S. P. Barua, were completed and brought into use during the year.
- (b) The new operation theatre for the Dhubri Civil Hospital was also completed and brought into use.
- (c) At Sibsagar, the new administrative block and outdoor dispensary, generously financed by Mr. R. A. Wood of Dihingmukh, was completed and is a great acquisition to the Civil Hospital. A new operating theatre was nearing completion towards the end of the year and has since been brought into use.
- (d) At Golaghat a self-contained female section is under construction out of a donation of Rs. 5,000 given by Srijut Gajanan Agarwala. This female hospital will fill a much felt want and will also be the means of adding to the male accommodation by setting free the existing Women's Ward for this purpose.
- (e) At Silchar a new ward is under construction, which is to be known as the Irwin Ward. It will provide accommodation for one paying patient. The cost of the ward, fully equipped, is estimated to be Rs. 2,300 and is to be met from the Irwin Fund, collected at the time of the Viceroy's visit to Silchar in 1929.

(f) A new and very fine dispensary building was under construction at the end of the year in Doom-Dooma. A sum of Rs. 10,000 was collected over a period of several years by Dr. D. P. Williams for this project, and he is to be congratulated on the fulfilment of his task. I had the privilege of opening this dispensary recently, and have no hesitation in saying that it is one of the best institutions of its kind in the Province.

12.(b) *Grants to Local Boards.*—No special grant for medicines and improvements of buildings were placed at my disposal for distribution to local fund institutions during the year.

It is very necessary for the Head of the Medical Department to have a discretionary grant at his disposal to enable him, during his inspections, to make non-recurring grants to local fund hospitals and dispensaries for purchasing equipment urgently required and improving buildings, etc.

The following special grants were however made by His Excellency the Governor and the Hon'ble the Minister in charge of the Medical Portfolio to institutions visited by them:—

	Rs.
1. For provision of Hospital Comforts—Gauhati Civil Hospital	27.
2. For Compounder's Quarters, North Gauhati Dispensary ...	150.
3. Grant towards construction of the Leper Asylum, Gauhati	250.

13. *General Remarks.*—I mention below certain matters of administrative importance:—

(1) *Anti-rabic treatment.*—The total number of patients treated in the Hospitals and Dispensaries of the province was 966, against 1,087 in the previous year. The Sylhet centre treated the largest number of cases viz., (331), followed by Sibsagar (143), Lakhimpur (115), Kamrup (113) and Cachar (86).

New anti-rabic centres were opened at Goalpara, Sibsagar, Golaghat and Hailakandi hospitals. Some private centres for treatment of anti-rabic cases were also started at Lumding (Assam Bengal Railway) and Dhamai and Mahima Tea Estates under the supervision of the Medical Officers at these places.

(2) *Yaws.*—The campaign against Yaws was continued during the year. Two hundred and sixty cases were treated in Civil Hospitals and Dispensaries, against 300 in 1932, while 1,215 cases were treated by the Public Health staff in charge of dispensaries under that Department.

Of the cases treated in Civil Hospitals and Dispensaries, 146 were reported by the Civil Surgeon, Cachar, and 61 by the Civil Surgeon, Kamrup. The disease is also prevalent in the hill districts and Manipur, and I am anxious to extend our anti-Yaws Campaign in order to diminish the number of actively contagious cases and in the hope of finally eradicating the disease from the Province. This is, of course, largely a Public Health concern and should be dealt with by the Public Health Department. It is proposed to make a survey and carry out curative treatment in the North Cachar Hills by the Sub-Assistant Surgeon in charge of the Travelling dispensary in that subdivision.

(3) *Goitre.*—The great prevalence of Goitre in the villages situated on the banks of the Dikhu river in the Sibsagar district was brought to notice during the year, and action was taken to institute a survey of the villages situated on the banks of this river. According to McCarrison, the prevalence of Goitre along a river is an indication of heavy sewage pollution; and the object of the survey is to ascertain how far up the river the Goitre incidence extends, to enable us to say what can be done. Up to date 37 villages have been examined and 938 cases of Goitre detected.

14. *Treatment of drug addicts.*—An interesting series of experiments were carried out by certain Civil Surgeons in the treatment of drug addicts by Modino's detoxication method. Excellent results were obtained by certain medical officers, while others who have not given the treatment a fair trial are apt to be pessimistic. One Civil Surgeon in particular has been so convinced of the efficacy of the treatment that he has raised the question of insisting upon the treatment being carried out prior to recommending opium passes to persons who profess themselves to be addicts and in need of opium. I am inclined to the opinion that the treatment is valuable in all cases where the patient is anxious to be cured of his particular drug habit.

15. *Medico-legal work*.—The number of medico-legal *post-mortem* examinations performed was 632. Of these 121 were performed by Civil Surgeons, 436 by Civil Assistant Surgeons and 75 by Sub-Assistant Surgeons, against 101, 468 and 63, respectively, in 1932.

The total number of police injury cases treated was 4,787 against 4,460 in 1932. Of these 123 were reported on by Civil Surgeons, 2,119 by Assistant Surgeons and 2,545 by Sub-Assistant Surgeons and Local Board Doctors, against 11, 2,032 and 2,417, respectively, in the previous year.

(6) *Post-graduate training of Sub-Assistant Surgeons*.—There are three training centres for refresher courses—one at Dibrugarh, one at Gauhati and one at Sylhet. Two courses were held during the year and eight Sub-Assistant Surgeons received training, including one Local Board Doctor.

More Government Sub-Assistant Surgeons would have been deputed to attend the 2nd course, but their services could not be spared owing to the cholera epidemic in the Surma Valley, which rather dislocated the normal working of the department. It is greatly regretted that the Local Boards are not taking advantage of refresher courses to the extent anticipated, owing to the small expenditure entailed. I can only hope that their attitude will change, when they begin to realize the advantages of sending their Medical Officers for this very necessary training.

(7) *The Indian Red Cross Society*.—The main activities of the Society during the year were as follows:—

(a) *Training of Nurses and Health Visitors*.—Six candidates were selected and deputed for training, 3 to the Lady Hardinge Medical College Hospital, New Delhi and 3 to the Calcutta Dufferin Hospital, at the expense of the Provincial Red Cross Society. One candidate was trained as a Health Visitor in Calcutta—the cost of training also being borne by the Provincial Society.

(b) *Establishment of a Child Welfare Centre and Maternity Home at Nowgong*.—A sum of Rs. 8,337 has been collected for the purpose. This sum has been obtained by a handsome donation of Rs. 6,000 from Babu Balabux Hensaria, a Marwari philanthropist, a contribution of Rs. 2,000 from the Provincial Red Cross Society and by local subscriptions.

(c) The Shillong Hospital for women and children, now under construction, was initiated by the Assam Branch of the Indian Red Cross Society.

The foundation stone of the hospital was laid by Lady Keane during the year and work in connection with the construction of buildings is in progress. The estimated cost of the project, amounting to nearly a lakh of rupees, will be met from generous subscriptions collected for the purpose by the Honorary Secretary, Assam Red Cross Society supplemented by substantial Government grants and a small grant given by the Countess of Dufferin Fund.

(d) Junior Red Cross groups were formed in several centres in the Province, and considerable headway has been made during the year with this special branch of training. At the close of 1933, 2401 boys and 505 girls were enrolled as members in the various groups.

(e) A Nari Sikha Asram has been established at Silchar with the object of giving sound instruction to women in Midwifery, Nursing, Weaving, Sewing, etc., so as to enable them to earn an independent livelihood.

(f) Substantial grants-in-aid were made to the Public Health Department for Tuberculosis and Leprosy propaganda and treatment.

Fuller details of the activities of the Red Cross Society are published in the Honorary Secretary's annual report for 1933.

(8) *Countess of Dufferin Fund*.—This fund continued to render substantial help towards the entertainment of Lady Doctors, Nurses and Midwives by the different local bodies in the province and for the training of nurses. A special non-recurring grant of Rs. 2,500 was made towards the building fund of the Shillong Hospital for Women and Children.

Three nurse pupils are under training in the Victoria Dufferin Hospital, Calcutta.

(9) *The Pasteur Institute and the Assam Medical Research Society*.—Government continued to give a grant of Rs. 25,000 to the Assam Medical Research Society. The activities of the Society were chiefly confined, to Malaria, Cholera and Dysentery. The work on Anaemia of Pregnancy and Pneumonia had to be discontinued for want of funds.

Malaria Surveys were carried out in 28 different areas in the Province, 19 of which the Malaria Officer was able to visit in the year. The staff employed by the Research Society on Malaria numbered 51. The expenses were met by contributions from the Assam Government, the Indian Research Fund Association, the Indian Tea Association, the Assam Oil Company, the Assam-Bengal Railway, 5 Municipalities, and 4 Local Boards and 3 Town Committees who asked for assistance.

Thirteen men of the Sub-Assistant Surgeon class (7 Government and 6 Local Board and Tea Estate) were trained in anti-malarial work during the year; and ten non-medical men received training as Collectors.

A cheap method of Malaria control by the use of rice bran as a diluent for paris green was experimented with and found successful. Of the Anopheline surveys carried out 16 were with special reference to *A. minimus*, *A. maculatus* and *A. philippinensis*.

Field experiments on the value of plasmoquine in reducing malaria were carried out. The results of these experiments are still indecisive, and more experimental field work is required to assess the true therapeutic value of this drug. In the plains of Assam where often the vector mosquito incidence is high and their infectivity rate also high, treatment with plasmoquine to reduce gametocyte carriers is of doubtful value owing to constant reinfection. In one area, however, where the mosquito incidence has been reduced, Plasmoquine appears to have been of value in reducing the numbers of gametocyte carrier children.

Bacteriophage continued to be used for the treatment and prevention of cholera. Nowgong district, where Bacteriophage is systematically distributed to the headmen of villages, had a mortality of 0.036 per 1,000. This is the fourth year in succession in which this district has had no outbreak of cholera. Previous longest period of freedom from cholera since 1906 is 1 year and 9 months in 1920-21.

As mentioned in last year's report a second experiment was undertaken in Habiganj subdivision. By July 1933 Bacteriophage had been distributed to every village in Habiganj. The northern half of Habiganj forms part of the delta of the Barak river; the rest of the delta being formed by Sunamganj, North Sylhet and Karimganj. In September cholera broke out in Cachar on the banks of the upper reaches of this river. The infection swept down the valley into the delta. Karimganj had 923 cases with 381 deaths, North Sylhet 955 cases with 493 deaths and Sunamganj 2,586 cases and 1,361 deaths. Habiganj had only 106 cases and 45 deaths. These figures contrast graphically with an exactly similar epidemic in 1927 when Sunamganj had 1,443 deaths and Habiganj 1,500.

In Cachar, as the two adjacent valleys of Silchar and Hailakandi were both infected under comparable conditions, Bacteriophage was used in Hailakandi and vaccination and essential oils in Silchar. The Ease with which Bacteriophage can be usefully distributed was shown by the ratio of the treated to untreated cases in each valley. With one sixth of the staff, the ratio of those treated with bacteriophage to those untreated was 5 to 1 in Hailakandi, whereas in Silchar the cases which received vaccine or essential oils to untreated were 7 to 8. For both valleys the untreated mortality was 70 per cent. Those only vaccinated had a mortality of 58 per cent. while 532 receiving essential oil had a mortality of 37.6 per cent. and 682 cases receiving Bacteriophage had a mortality of 20.7 per cent. Silchar Valley, for 1,488 cases, had a total mortality of 53.6 per cent. and Hailakandi, for 935 cases, a mortality of 31.9 per cent.

Technical researches in the laboratory clearly show that the changes brought about on the cholera vibrio by Bacteriophage go far to explain the results obtained in the prevention and treatment of cholera in the field.

In dealing with the Cholera Epidemic in Cachar and Sylhet it became necessary to mobilise all available medical forces to deal vigorously with the situation, and it is very pleasing to record the team spirit exhibited by the officers of the Medical Department, Public Health Department and Assam Medical Research Society in carrying out the preventive and treatment campaign. Their efforts

were most successful ; and one and all are to be congratulated on their high sense of duty and disregard of danger which resulted in the saving of a great many lives and in bringing the epidemic under rapid control.

(10) *Provincial Malaria Committee.*—This committee held three meetings in 1933. Various schemes relating to Malaria were considered and some considerable headway was made with Malaria control during the year.

A lump sum provision of Rs. 24,800 was made for carrying out anti-malarial measures in the province and of this sum Rs. 18,426 was spent. Anti-malarial surveys and anti-larval measures were carried out in 91 areas during the year.

(11) *Nursing.*—The nursing service was further developed during the year by the appointment of three trained sisters of charity in the Dibrugarh Civil Hospital. The two sisters entertained previously in the Gauhati Civil Hospital worked there throughout the year.

A comprehensive scheme of Nursing has been worked out for the proposed new Civil Hospital and the Women and Children's Hospital, Shillong, and quarters are under construction near the site of the two Hospitals. The nurse appointed at Nowgong in 1932, continued to work there during the year under report.

Six selected women from this province are now undergoing training at Calcutta and Delhi and it is hoped to employ them all on completion of their training in different Hospitals in the Province.

(12) *Combating Tuberculosis*—A special course of lectures on the prevention and treatment of tuberculosis for the benefit of Medical and Public Health students was instituted last year in the Berry-White Medical School and now forms part of the curriculum.

The Sub-Committee formed last year with the Inspector General of Civil Hospitals, Assam, as Chairman and the Director of Public Health as Secretary is still functioning.

A sum of Rs. 1,000 was received from the Organising Secretary, King George Thanksgiving Fund and a sum of Rs. 1,000 from the Provincial Red Cross Society for propaganda work. Pamphlets and charts on Tuberculosis in Assamese and Bengali were distributed for instructional purposes to the Middle English and High English Schools through the Director of Public Instruction and supplied broadcast to the public through the Public Health Medical Officers. Similar pamphlets are being translated into Khasi for distribution in the Khasi Hills.

(13) As far as the financial condition permitted, improvements were effected in bringing about general efficiency in hospital administration and providing better facilities for the treatment of in-patients. Any progress made with actual building construction was entirely due to private philanthropy, and my thanks are due to the generous donors.

(14) *Conduct of Officers.*—The officers of the department and Subordinate medical staff continued to give loyal and efficient service throughout the year, and my thanks are due to them for their willing co-operation and support. Their good work is reflected in the greater efficiency of the medical institutions of the province and the progress made in Child Welfare and allied activities. The manner in which the Cholera Epidemic in the Surma Valley was tackled and controlled reflects credit on the administration as a whole and the officers immediately concerned in particular.

My office staff was reduced during the year by the retrenchment of a lower division clerk and a daftri, which entailed additional work for the remaining clerks. This, however, was undertaken cheerfully and efficiency maintained. Dr. P.C. Guha, who held the office of Personal Assistant for 3½ years with conspicuous ability, was succeeded during the year by Dr. K. K. Banerjee, who is proving himself an able successor. Babu Bepin Behari Das, my Head Clerk, proceeded on leave preparatory to retirement at the end of the year. He served in the office for over 31 years and proved himself to be a most efficient clerical officer.

Your obedient servant,

J. P. CAMERON, *Colonel, I.M.S.,*

Inspector General of Civil Hospitals, Assam.
